Career Objective

Collaborator and confident person with the aptitude for acquiring new technologies. Learned and improved my skills to obtain a full stack developer position to provide clean and effective solutions to the organization business projects.

Educational Background

Bachelor's in computer engineering (2012-2017)

Jordan, al-Zarqa

Technical Skills

Programming Languages and Technologies (self-learning):

- Java, Spring core, Spring MVC, Spring Boot and JSP using clean code and effective java principles
- HTML5, CSS3, SASS, Bootstrap4
- Javascript
- React JS, Redux
- Hibernate, SQL
- Git, GitHub
- Familiar with web services REST
- Postman

Soft Skills

- Self-motivated to learn new technologies and languages
- Ability to work hard and meet deadlines
- Problem solving skills
- Work effectively both as team member and independently
- Self-Confidence with strong work ethic

Graduation Project

Project Scope: An indoor positioning system based on the Wi-Fi signals. The system used to localize and navigate inside large-scale constructions. My tasks summarized to design and develop the test area building map and integrate it with a mobile application that is used to display the position of the user. We had a published paper at IEEE conference in Jordan that reports our project results.
